To Whom It May Concern

Dyna-Mac Engineering Services Pte Ltd

SB required that their Amoxycillin Production Facility in Singapore be revamped during a demanding fast track shutdown during seventeen weeks starting in April 2000.

After a competitive tender exercise, Dyna-Mac were awarded the mechanical and piping sub-contract. The principal elements of which comprised ; provision of "shop" isometrics, disinvestment, installation of mechanical plant, piping fabrication and erection (including an orbitally welded Purified Water System).

Prior to the shutdown commencing Dyna-Mac developed a constructive working relationship with SB and KEC to identify opportunities for pre-shutdown activities.

During the shutdown SB found Dyna-Mac to be a flexible and adaptable sub contractor with strong customer orientated and safety management cultures.

The commitment and enthusiasm throughout their organisation from operative to Senior Management level was a major contributor to the overall achievement of the project goals.
